Welcome!

Hi! I am Nicole Gabor an aspiring UI and User Experience Designer learning new things every day. I hope to dive into exciting projects and bring my unique perspective and passion for simplicity and efficiency to all projects I pursue, take a look at some of my recent projects on GitHub <https://github.com/nikatwork> and follow me on LinkedIn <https://www.linkedin.com/in/nicolegabor/>.

My Bio...

I have a big family and we enjoy getting together for a family meal every holiday and birthday. I have four kids and 5 grandchildren with one more on the way.

We love our little wiener dogs

Last year I received a Certification in User Experience and Design from Weber State University and am currently pursuing a BS in User Experience with a Minor in Data Analytics

For many years, my husband and I owned a full-service restaurant, and we miss it every day, but are enjoying cooking dinner together now. We still use the lessons from that experience in our lives every day.

My favorite things to do are listening to records and cooking with family, I enjoy pilates classes, and sew whenever I can

Logo

Logos

My son and I have collaborated on several different logos, he is the artist following guidelines for each project, he is the true talent here but I am very proud of the collaboration and wanted to show the logos he has helped me with, we work as a collaboration team on all of my projects where I need artistic talent and inspiration. He is the best.. The skiing Alien was for an Air Force Software Development Team where I worked for three years. He created the logo shown below with three different options. The G is a new logo created for a water feature small business and the NG Pizza logo was created for a school assignment representing our small restaurant business that we owned for many years. The restaurant logo was created by my husband, Jeff Gabor - the three little men - and was the inspiration for the NG Pizza logo.

Logo Artist Kenny Gabor

BlogApetit - Gabor Family Recipe Video Repository and Blog Page

Primary Colors

Header 1

Header 2

Header 3

Paragraph

Hover

Info

Components:

- + Logo
- + Icons
- + At least 2 example of an image you would use (3 is even better)
- + At least 1 example of a button, in at least 3 states (inactive, hover, active)

Color Palette

Typeography

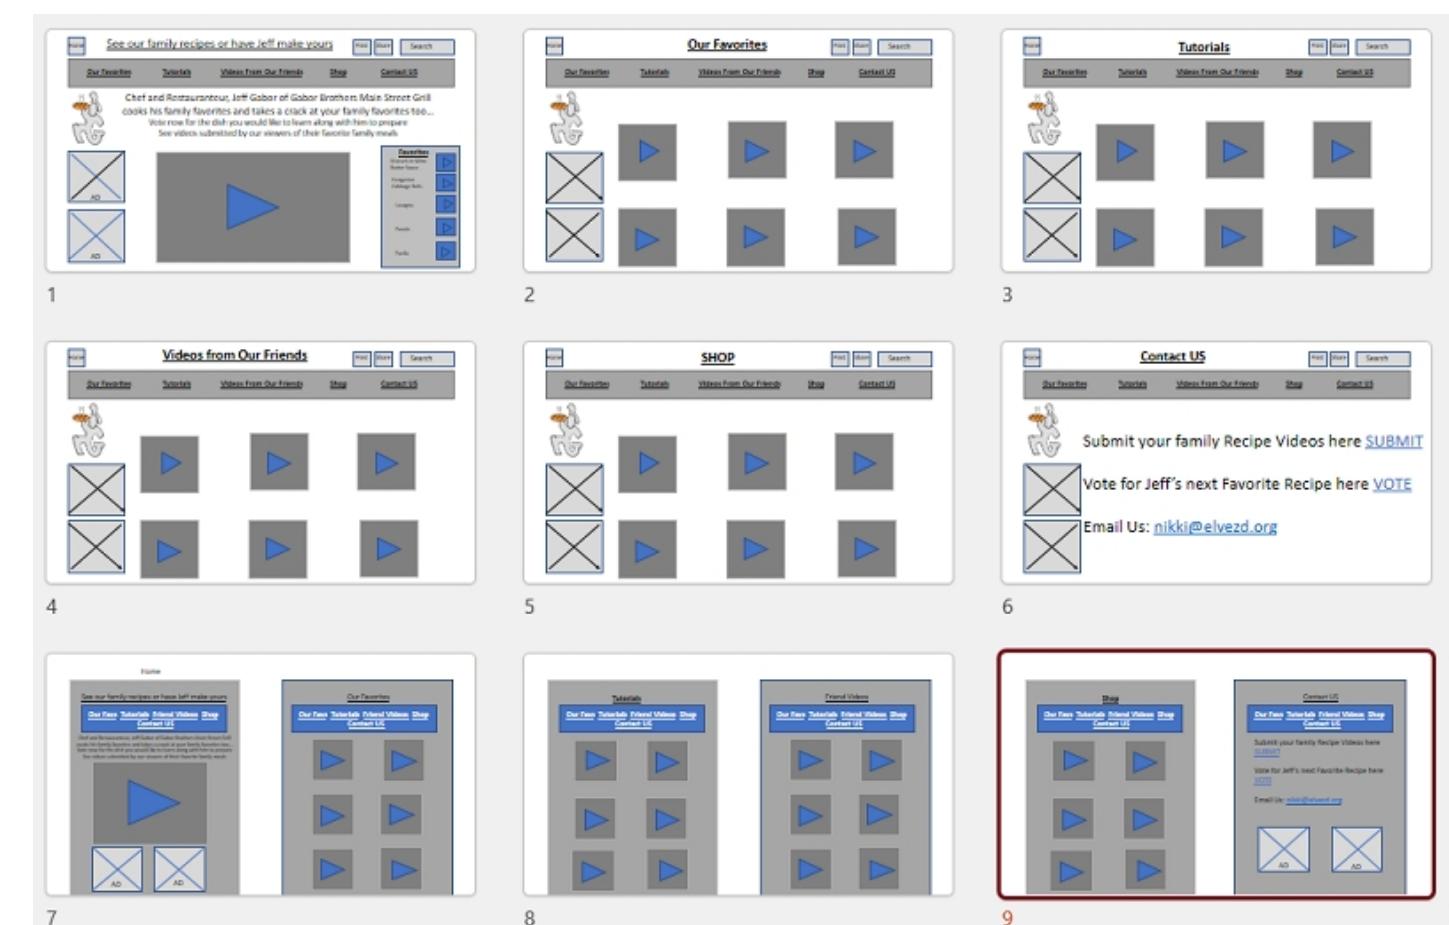

- + Heading 1-3
- + Paragraph example

3-5 adjectives (branding keywords)

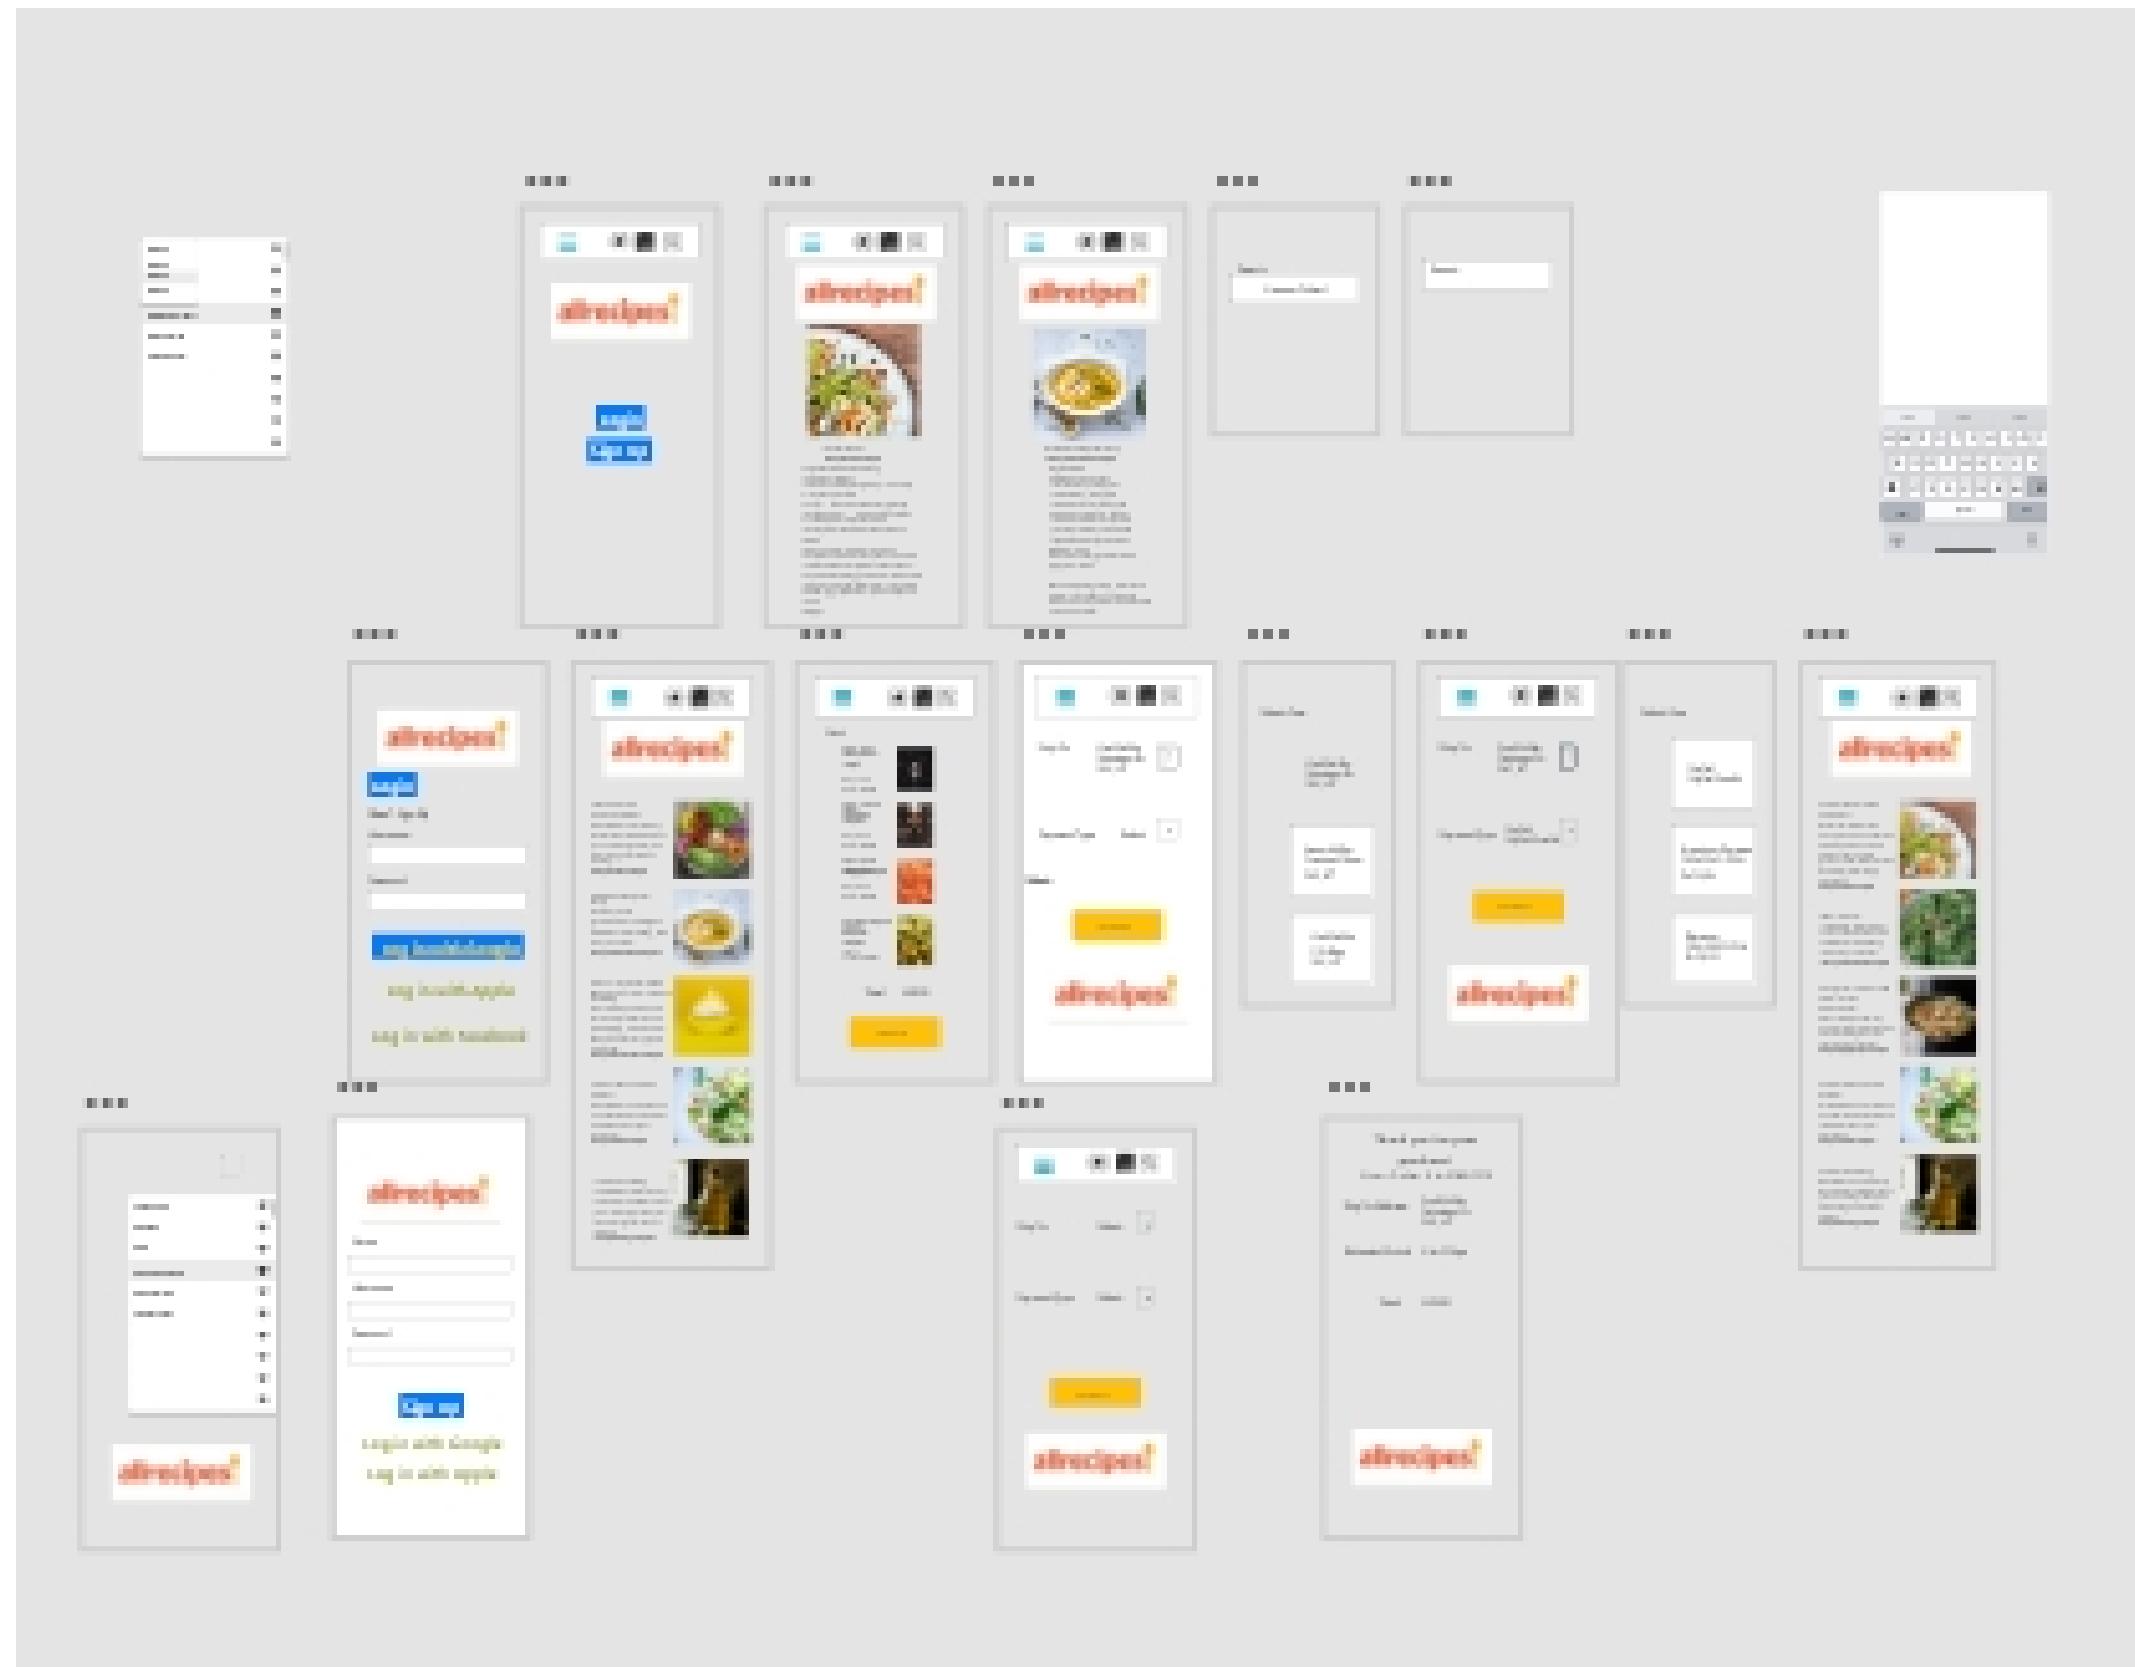

Optionally, you can include other elements on your mood board such as:

- + Cards
- + Header bar with logo
- + Form elements
- + Image gallery
- + etc.

You can use the following template to ensure you have all the required elements. Feel free to add other elements as needed:

Shown here are three stages for this website project. The page was built as a final in my WEB 3500 class at Weber State University I started with the style guide then created a low prototype, a medium prototype in xd and then went on to code the full website.

This prototype was created as a possible alternative to their current website. This was an assignment in a prototyping class from Weber State University. I participated as part of a three person team. We created the prototype and each of us tested it on three different potential users to see if they were able to navigate the site and collect feedback on their experience with it. We kept notes, recorded and then incorporated their input into the design. What you see here is the final prototype.

If you follow the link you can try using the prototype and complete the following tasks;

First log in with Google

Try a search for a Ceasar salad

Try checking out with using the cart.

The WEB 3600 Final was to write a usability study, I chose the topic

'Icon Styles in a Toolbar that may Increase Usage and Functionality'

The following study was performed to gather research on favored icon styles in a toolbar, delving into the details of icon size, quality, type, and clarity. Showing examples of toolbars that use words or flat icons as selectors and combining words and photo icons to a small group of participants and measuring their preferences for each option through prototypes, interviews, and usability testing. There were five participants and they ranged in age, occupation, gender, and phone usage. This study indicates that clarity and ease of use is most important with styling a close second.

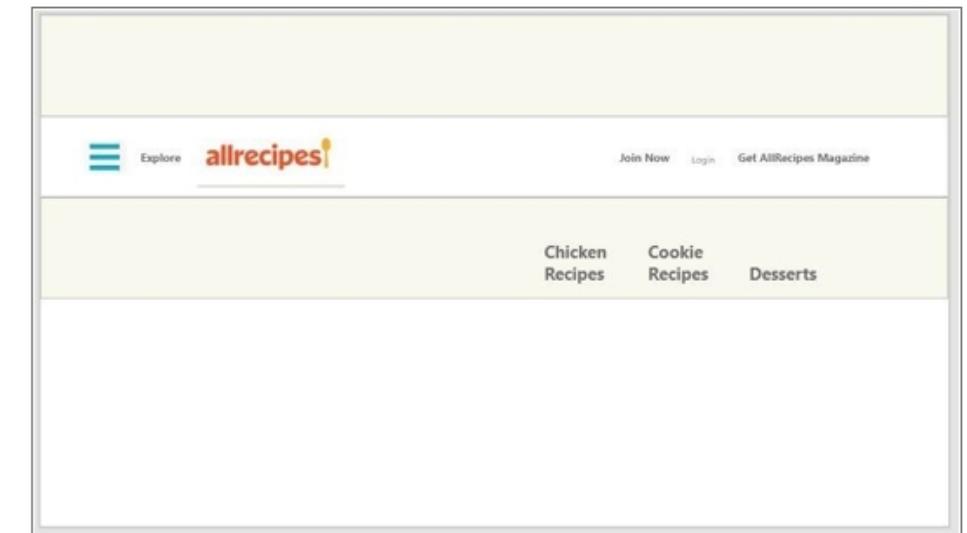

Figure 4. Prototype 2: Word Icons without symbols or picture Icons.

Figure 3. Prototype 1: Flat picture icons without text

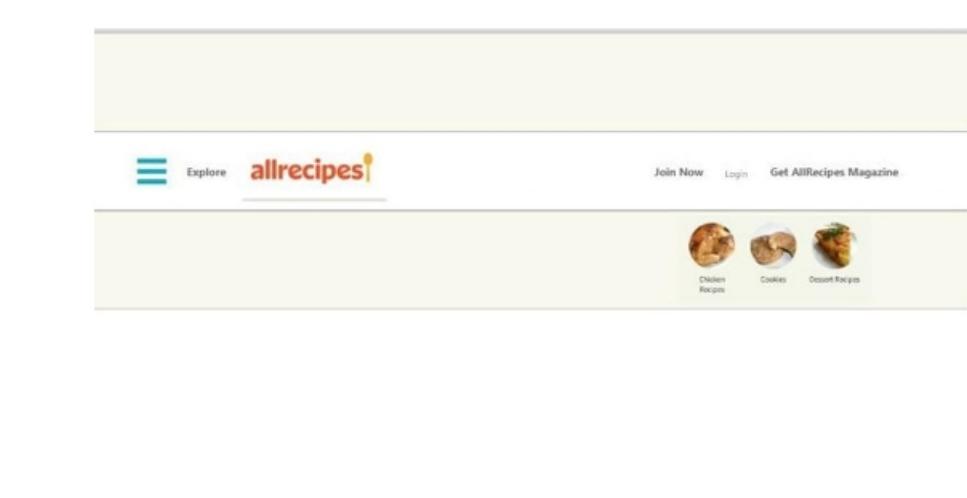

Figure 5. Prototype 3: -Current AllRecipes Toolbar with labeled photo icons.

About Me

Many of the design concepts I care about are based on experiences gained from owning our own small restaurant for 15 years. As a business our focus was on creating an excellent product and providing a memorable user experience for our guests.

There were many aspects of our business that peaked my interest in UX and UI, and the importance of data for reporting and decision making. We used a POS (Point of Sale) system to track the goods that sold the most and used the data to make decisions on our menu. We also depended on our website and reviews to bring in new business. These observations started my journey to a formal education in User Experience and Design.

For the last three years I have been studying the principles of User Experience and Design at Weber State University in Ogden Utah and received a certification in User Experience and Design in August of 2022 and am a few semesters away from my Degree as a Full Stack User Experience Design Developer.
